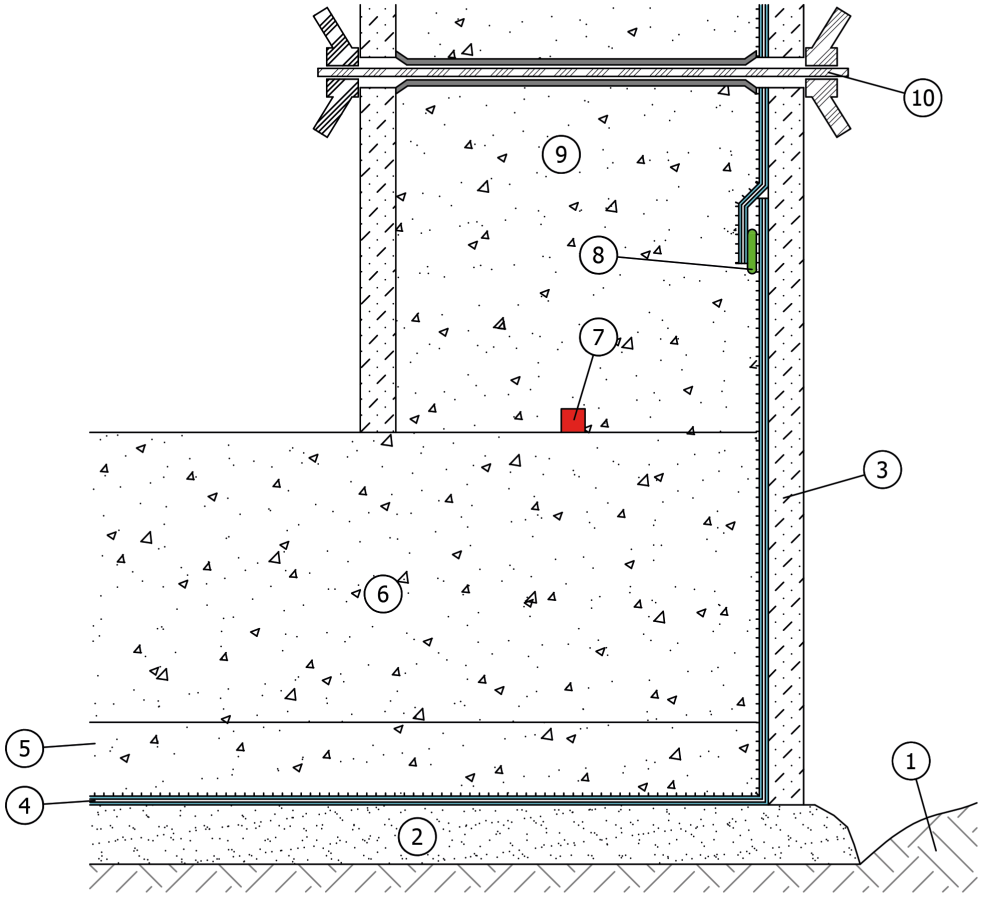
Construction joint with AMPHIBIA pre-applied on formworks without toe

Field	Underground waterproofing
Type of work	Reinforced concrete
Boundary conditions	Aquifer
Construction	New
Excavation type	Confined
Type of material(s)	HYDRO-REACTIVE SYSTEM
Sequence of installation	Before pouring concrete
Level of risk	High
Type of protection	Waterproofing barrier

1. Soil
2. Lean concrete
3. Formwork
4. AMPHIBIA 3000 GRIP
5. Protection screed (optional)
6. RC raft foundation suitable to withstand hydraulic pressures and exempt from defects
7. WT 102
8. Apply staples to fix vertically the sheets on the formworks and BI MASTIC
9. RC wall suitable to withstand hydraulic pressures and exempt defects
10. PVC distance tube to seal consequently with AMPHIBIA STOPPER and AKTI-VO 201



PLEASE NOTE: Dilatation joints must be realized on the screeds, having position and length according to the Designer's specifics, and sealed with GARVO. The waterproofing SYSTEMs must be installed continuously all along the whole structure subjected to intervention, keeping the continuity between all waterproofed surfaces, horizontal and vertical; any kind of joint (e.g. dilatation joints on the screeds, structural joints etc.), penetration, corner and every possible crack must be sealed with suitable VOLTECO SYSTEMs, applied in continuity with one another (see VOLTECO technical data sheets), in order to avoid any chance of seepage. The structures must be suitable to withstand every kind of load that they will undergo.
Dilatation joints must be realized on the screeds, having position and length according to the Designer's specifics, and sealed with GARVO
All structures have to be suitable to withstand all future loads
