

Declaration of performance: No. 0035-CPR-2023/06/13

1) Unique identification code of the product-type:

BI FIX 300

2) Intended use or uses of the construction product, in accordance with the applicable harmonised technical specification, as foreseen by the manufacturer

Generic type and use		Chemical anchoring for threaded rods							
Size		M8	M10	M12	M16	M20	M24	M27	M30
hef [mm]	min	60	70	80	100	120	145	145	145
	max	160	200	240	320	400	480	540	600

Generic type and use		Chemical anchoring for reinforcing bars								
Size		Ø8	Ø10	Ø12	Ø14	Ø16	Ø20	Ø25	Ø28	Ø32
hef [mm]	min	60	70	80	80	100	120	150	180	200
	max	160	200	240	280	320	400	500	560	640

Type and strength of the substrate	Reinforced or unreinforced concrete of normal weight, strength class from C20/25 minimum to C50/60 maximum in accordance with EN 206-1.
Base material condition	Not cracked from M8 to M30 and from Ø8 to Ø32, cracked from M10 to M20. Seismic category C1 from M12 to M20 and seismic category C2 for M12 and M16.
Anchor metal material and corresponding environmental exposure	Threaded rods: X1) Structures subject to dry internal conditions: elements made of galvanised steel (galvanised or hot-dip galvanised) and stainless steel A2, A4 or high corrosion resistance (HCR). X2) Structures subject to outdoor atmospheric exposure (including industrial and marine environments) and permanently wet indoor conditions if no aggressive conditions exist: Elements made of A4 stainless steel or high corrosion resistance (HCR) steel. X3) Structures subject to outdoor atmospheric exposure (including industrial and marine environments) and permanently wet indoor conditions if other special aggressive conditions exist. Such special aggressive conditions are e.g. permanent immersion, alternating in the sea water or sea water spray area, chloride atmosphere in swimming pools or indoor environments with chemical pollution (e.g. in desulphurisation plants or road tunnels where anti-ice materials are used): Elements made of corrosion resistant steel (HCR). Improved grip bars class B or C according to EN 1992-1-1

Type of loading	Static, quasi-static and seismic load category C1 and C2.
Service temperature range	a) from -40°C to +40°C (max. short-term temperature +40°C and max. long-term continuous temperature +24°C). b) from -40°C to +80°C (max. short-term temperature +80°C and max. long-term continuous temperature +50°C). c) from -40°C to +120°C (max. short-term temperature +120°C and max. long-term continuous temperature +72°C).
Use category	Category I1 and I2: dry, wet and flooded concrete. Overhead installation permitted. Drilling with standard drill or with suction bits.

3) Name, registered trade name or registered trade mark and contact address of the manufacturer as required under Article 11(5)

VOLTECO S.p.A. - Via delle Industrie, 47 - Ponzano Veneto (Italy) www.volteco.com

4) System or systems of assessment and verification of constancy of performance (AVCP) of the construction product as set out in annex V

System 1

5) In case of the Declaration of Performance concerning a construction product covered by a harmonised standard

Not applicable

6) Declared performance:

*ITB issued l'ETA-20/0532 on the basis of EAD 330499-01-0601.
ITB (n°1488) performed:
The determination of the product type on the basis of type testing (including sampling), type calculation, tabulated values or descriptive documentation of the product; the initial inspection of the factory and of the factory production control; the continuous surveillance; assessment and approval of the factory production control; under system 1 and issue the certificate of conformity n° 1488-CPR-1040/W.*

7) The performance of the product identified in points 1 and 2 is in conformity with the declared performance in point 6. This declaration of performance is issued under the sole responsibility of the manufacturer identified in point 3.

HARMONIZED TECHNICAL SPECIFICATION: EAD 330499-01-0601

ESSENTIAL CHARACTERISTICS	PERFORMANCE
Reaction to fire	In the final application the thickness of the mortar layer is about 1 to 2 mm and most of the mortar is material classified class A1 according to EC Decision 96/603/EC. Therefore it may be assumed that the bonding material (synthetic mortar or a mixture of synthetic mortar and cementitious mortar) in connection with the metal anchor in the end use application do not make any contribution to fire growth or to the fully developed fire and they have no influence to the smoke hazard.
Fire resistance	NPD

TERMINOLOGY AND SYMBOLS

d	Rod diameter
d_0	Drill hole diameter
d_{fix}	Hole diameter of the object to be fixed
h_{ef}	Effective anchorage depth
h_1	Hole depth
h_{min}	Minimum thickness of base material
T_{Fix}	Installation torque
t_{fix}	Fixture thickness
S_{min}	Minimum allowable spacing
C_{min}	Minimum allowable edge distance
$N_{Rk,s}$	Characteristic tensile strength on steel side in case of static load
$N_{Rk,s,C1}$	Characteristic tensile strength on steel side for seismic category C1
$N_{Rk,s,C2}$	Characteristic tensile strength on steel side for seismic category C2
$V_{Rk,s}$	Characteristic shear strength on steel side in case of static load
$V_{Rk,s,C1}$	Characteristic shear strength on steel side for seismic category C1
$V_{Rk,s,C2}$	Characteristic shear strength on steel side for seismic category C2
τ_{Rk}	Characteristic adhesion in non-cracked (uncr), cracked (cr), seismic category C1 and C2 concrete
A_s	Cross section area
A_5	Fracture elongation
$M^0_{Rk,s}$	Characteristic bending moment
W_{el}	Modulus of elastic resistance
α_{gap}	Hole filling factor
k_7	Ductility factor
k_8	Coefficient for concrete undermining
N_{Rk}	Characteristic resistance for pull-out and concrete cone formation for single anchorage

TERMINOLOGY AND SYMBOLS	
γ_{inst}	Partial safety factor related to the anchoring installation
$S_{cr,Np}$	Interaxle spacing to ensure characteristic pull-out load transmission for a single anchorage
$C_{cr,Np}$	Distance from the edge to ensure the transmission of the characteristic pull-out load for a single anchorage
$k_{uncr,N}$	Non-cracked concrete coefficient
$k_{cr,N}$	Cracked concrete coefficient
$S_{cr,N}$	Interaxle spacing to ensure the transmission of the characteristic load due to formation of the concrete cone for a single anchoring
$C_{cr,N}$	Distance from the edge to ensure the transmission of the characteristic load due to formation of the concrete cone for a single anchoring
$S_{cr,sp}$	Interaxle spacing to ensure the transmission of the characteristic load for concrete splitting for a single anchorage
$C_{cr,sp}$	Distance from the edge to ensure characteristic load transmission by splitting the concrete for a single anchorage
$\Psi_{c,ucr}$	Increment factor for classes of non-cracked concrete
$\Psi_{c,cr}$	Increment factor for classes of cracked concrete
l_f	Actual length
F	Service load in non-cracked concrete (ucr) or cracked concrete (cr)
δ_0	Short-term displacement under service load in non-cracked concrete (uncr) or cracked concrete (cr)
δ_∞	Long-term displacement under service load in non-cracked concrete (uncr) or cracked concrete (cr)
NPD	No performance declared

8)The performance of the product identified in Points 1 and 2 is in conformity with the declared performance in Point 6. This declaration of performance is issued under the sole responsibility of the manufacturer identified in Point 3.

Signed for and on behalf of the manufacturer by

Ruzzier Marco – Laboratory Manager
